

Secondary Lead Production (Pyrometallurgical Treatment) **CX[®] Process**

Title: Improved CX Process for Spent Lead Acid Batteries Treatment

Paper presented at: EDP Congress 1993, Proceedings of TMS Annual Meeting; February 21st-25th, 1993; Denver, Colorado, U.S.A.

Authors: Tullio Corsini - Engitec Impianti S.p.A. – Milan, Italy

Abstract: Scrap battery recovery process, developed by Engitec Impianti S.p.A., is improved transforming batch operations in continuous.

Benefit expected: constant and better quality of the products; easier and more reliable control of operating parameters, reduction of manpower requirements.

Paste will content less sulphate, particularly in soluble form.

Sodium sulphate is obtained with higher and constant purity.
